**Event #2, 2019:  
Trace Elements in Whole Blood, Urine, and Serum**  
8/23/2019

Dear Laboratory Director,

This report summarizes performance for the second biomonitoring proficiency test (PT) event of 2019 for Trace Elements in Whole Blood, Urine, and Serum. One of the key goals of this PT program is to achieve harmonization of biomonitoring data for trace elements.

**Target Value Assignment and Performance Evaluation:**

For these PT materials, target values have been assigned for a limited number of trace elements that are gradable under criteria set by the NYS DOH Biomonitoring PT program. See assay-specific narratives for details. Data for additional trace elements are reported and are included here in order to characterize the PT materials more completely. Participant data and descriptive statistics are provided for educational purposes. No target value or acceptable range is implied.

Where the data permit, robust statistics were used to assign target values based on Algorithm A as defined by ISO 13528:2005E *Statistical methods for use in proficiency testing by inter-laboratory comparisons* [1]. Acceptable ranges for the graded elements are based on consensus criteria and/or those set by the NYS DOH's PT program. For example, some are fixed based on US regulatory guidelines (Pb, Cd) while for other elements the criteria are based on a consensus of the Network of PT scheme organizers for trace elements in occupational and environmental laboratory medicine [2]. Quality specifications are element and matrix specific; full details are provided under each element specific narrative.

A confidential, three-digit code number assigned by PT program staff identifies all laboratory participants.

Samples for the next PT event (Event #3, 2019) will be shipped September 18, 2019. Comments about this report may be directed to [trel@health.ny.gov](mailto:trel@health.ny.gov).

Sincerely,

A handwritten signature in blue ink that reads "Patrick J. Parsons".

Patrick J. Parsons, PhD

## Event #2, 2019: Trace Elements in Whole Blood

### PT Materials

Human whole blood was purchased from Zen-Bio, Inc. and preserved with K<sub>2</sub>EDTA. The company certifies that this material was "non-reactive" for HBsAg, HBV DNA, HIV-1,2 Ab, HIV-1 RNA, HCV Ab, HCV RNA, and STS. Units of whole blood were filtered into polypropylene containers through cheesecloth to remove particulates and supplemented with arsenic (As), cadmium (Cd), cobalt (Co), chromium (Cr), mercury (Hg), manganese (Mn), lead (Pb), barium (Ba), beryllium (Be), copper (Cu), molybdenum (Mo), nickel (Ni), platinum (Pt), antimony (Sb), selenium (Se), tin (Sn), titanium (Ti), thallium (Tl), uranium (U), vanadium (V), tungsten (W), and zinc (Zn). Whole blood samples were homogenized overnight prior to aliquoting 2-mL into polypropylene vials. PT samples were stored at -80°C until the week of the PT event, when they were thawed at 4°C prior to circulation to laboratories for analysis.

### Graded Elements

Seven elements in whole blood are formally graded: As, Cd, Co, Cr, Hg, Mn, and Pb. Target values for the graded elements are assigned to these pools based on (a) the robust mean calculated from data reported by all laboratories, or (b) if a robust mean is not possible, the arithmetic mean after outlier deletion.

### Additional Elements

An additional 25 elements were reported by at least one participant: Ag, Al, Ba, Be, Bi, Cs, Cu, I, Li, Mg, Mo, Ni, Pt, Sb, Se, Sn, Sr, Te, Th, Ti, Tl, U, V, W, and Zn. These data are included here to provide a more complete characterization of the PT materials. All results reported by participant laboratories are tabulated and organized by lab code. The PT data are graphed for visual comparison purposes for all elements where at least five laboratories reported a value greater than the LOD. A statistical summary table is provided for samples where at least two comparable values were reported as above the LOD.

The summary statistics for the additional elements are provided for educational purposes only, i.e., no acceptable response is implied. However, it is expected that each laboratory would wish to investigate a potential source of bias if warranted by these data. Future events might result in additional elements becoming graded if a consensus can be reached regarding desired quality specifications.

## Results for Event #2, 2019: Summary Statistics

Whole Blood As ( $\mu\text{g/L}$ )					
	BE19-06	BE19-07	BE19-08	BE19-09	BE19-10
<b>Target (Arithmetic Mean (<math>\bar{x}</math>))</b>	45.0	3.9	18.0	23.5	11.7
<b>Upper Limit</b>	54.0	9.9	24.0	29.5	17.7
<b>Lower Limit</b>	36.0	0.0	12.0	17.5	5.7
<b>Arithmetic SD (s)</b>	2.0	0.4	0.9	2.0	0.6
<b>Arithmetic RSD (%)</b>	4.4	9.9	4.8	8.5	5.1
<b>Number of Sample Measurements (N)</b>	8	8	8	9	8

The acceptable range is based on quality specifications:

$\pm 6 \mu\text{g/L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 6 \mu\text{g/L}$  at concentrations less than or equal to  $30 \mu\text{g/L}$ . These quality specifications were established by New York State Department of Health's Wadsworth Center, the PT Program organizer.

## Results for Event #2, 2019: Summary Statistics

	Whole Blood Cd ( $\mu\text{g}/\text{L}$ )				
	BE19-06	BE19-07	BE19-08	BE19-09	BE19-10
<b>Target (Robust Mean (<math>x^*</math>))</b>	1.09	8.4	2.91	5.1	11.6
<b>Upper Limit</b>	2.09	9.7	3.91	6.1	13.3
<b>Lower Limit</b>	0.09	7.1	1.91	4.1	9.9
<b>Robust SD (<math>s^*</math>)</b>	0.05	0.5	0.16	0.3	0.5
<b>Robust RSD (%)</b>	4.1	6.3	5.5	6.1	4.3
<b>Number of Sample Measurements (N)</b>	14	15	15	15	15
<b>Standard Uncertainty (<math>u</math>)</b>	0.01	0.2	0.05	0.1	0.2

The acceptable range is based on quality specifications:

$\pm 1 \mu\text{g}/\text{L}$  or  $\pm 15\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 1 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $6.7 \mu\text{g}/\text{L}$ . These quality specifications are based on those used by US OSHA for occupational exposure.

Based on the grading criteria for Mn in Whole Blood, 92% of results were satisfactory, with 1 of the 12 laboratories reporting 2 or more of the 5 results outside of the acceptable ranges.

\* Denotes a statistical Outlier

## Results for Event #2, 2019: Summary Figures

### Whole Blood Mn

#### Legend:

○ CHEAR Labs   ● Other Labs

Horizontal purple line = assigned target value based on the robust mean of all laboratories.

Gray area = acceptable range based on quality specifications:  
 $\pm 3 \mu\text{g}/\text{L}$  or  $\pm 17\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 3 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $17.7 \mu\text{g}/\text{L}$ .

## Results for Event #2, 2019: Summary Statistics

	Whole Blood Pb ( $\mu\text{g/dL}$ )				
	BE19-06	BE19-07	BE19-08	BE19-09	BE19-10
<b>Target (Robust Mean (<math>x^*</math>))</b>	11.4	71	31.5	21.3	2.35
<b>Upper Limit</b>	13.4	78	34.7	23.4	4.35
<b>Lower Limit</b>	9.4	64	28.4	19.2	0.35
<b>Robust SD (<math>s^*</math>)</b>	0.7	3	1.8	1.4	0.10
<b>Robust RSD (%)</b>	6.1	4.8	5.7	6.6	4.3
<b>Number of Sample Measurements (N)</b>	16	15	16	16	14
<b>Standard Uncertainty (<math>u</math>)</b>	0.2	1	0.6	0.5	0.03

The acceptable range is based on quality specifications:

$\pm 2 \mu\text{g/dL}$  or  $\pm 10\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 2 \mu\text{g/dL}$  at concentrations less than or equal to  $20 \mu\text{g/dL}$ . These quality specifications are recommended by the Clinical Laboratory Standards Institute (CLSI, C40-A2) and have been proposed for use in proficiency testing programs approved under CLIA by the Centers for Medicare and Medicaid Services (CMS) in the USA. (<https://clsi.org/standards/products/clinical-chemistry-and-toxicology/documents/c40/>)

# **Trace Elements in Urine**

**Wadsworth Center**  
NEW YORK STATE DEPARTMENT OF HEALTH  
*Trace Elements Laboratory*

## **Event #2, 2019: Trace Elements in Urine**

### **PT Materials**

Urine was collected from volunteer donors into polyethylene containers and stored at 4°C. Following collection, urine was acidified to 1% (v/v) with nitric acid and mixed with a sulfamic acid solution (stock solution contained 200 mg/mL sulfamic acid and 10% (v/v) Triton-X 100) to a final concentration of 1% (v/v) to stabilize Hg. Urine was stored frozen at -80°C pending further preparation. The urine was thawed at room temperature and precipitated salts removed by centrifugation. Urine supernatants were combined into five separate pools. Each urine pool was supplemented with arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), cobalt (Co), chromium (Cr), mercury (Hg), manganese (Mn), lead (Pb), thallium (Tl), uranium (U), aluminum (Al), cesium (Cs), copper (Cu), molybdenum (Mo), nickel (Ni), platinum (Pt), antimony (Sb) selenium (Se), tin (Sn), strontium (Sr), tellurium (Te), vanadium (V), tungsten (W), and zinc (Zn) and were homogenized overnight prior to aliquoting 10-mL into polypropylene vials. PT samples were stored at -80°C until the week of the PT event, when they were thawed at 4°C prior to circulation to laboratories for analysis.

### **Graded Elements**

Eleven elements in urine are formally graded: As, Ba, Be, Cd, Co, Cr, Hg, Mn, Pb, Tl, and U. Target values for the graded elements are assigned to these pools based on (a) the robust mean calculated from data reported by all laboratories, or (b) if a robust mean is not possible, the arithmetic mean after outlier deletion.

### **Additional Elements**

An additional 20 elements were reported by at least one participant: Ag, Al, Bi, Cs, Cu, Fe, Li, Mg, Mo, Ni, Pt, Sb, Se, Sn, Sr, Te, Th, V, W, and Zn. These data are included here to provide a more complete characterization of the PT materials. All results reported by participant laboratories are tabulated and organized by lab code. The PT data are graphed for visual comparison purposes for all elements where at least five laboratories reported a value greater than the LOD. A statistical summary table is provided for samples where at least two comparable values were reported as above the LOD.

The summary statistics for the additional elements are provided for educational purposes only, i.e., no acceptable response is implied. However, it is expected that each laboratory would wish to investigate a potential source of bias if warranted by these data. Future events might result in additional elements becoming graded if a consensus can be reached regarding desired quality specifications.

of Health**

Wadsworth  
Center

## Results for Event #2, 2019: Summary Statistics

	Urine As ( $\mu\text{g/L}$ )				
	UE19-06	UE19-07	UE19-08	UE19-09	UE19-10
<b>Target (Robust Mean (<math>x^*</math>))</b>	66.8	77	26.7	9.7	188
<b>Upper Limit</b>	80.2	92	32.7	15.7	226
<b>Lower Limit</b>	53.4	61	20.7	3.7	150
<b>Robust SD (<math>s^*</math>)</b>	2.8	4	1.0	0.6	8
<b>Robust RSD (%)</b>	4.2	4.6	3.7	6.2	4.3
<b>Number of Sample Measurements (N)</b>	20	20	20	20	20
<b>Standard Uncertainty (<math>u</math>)</b>	0.8	1	0.3	0.2	2

The acceptable range is based on quality specifications:

$\pm 6 \mu\text{g/L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 6 \mu\text{g/L}$  at concentrations less than or equal to  $30 \mu\text{g/L}$ . These quality specifications are based on the same criteria used by the US Centers for Disease Control Prevention (CDC) for public health labs participating in the Laboratory Response Network (LRN) PT program for Toxic Metals.

## Results for Event #2, 2019: Performance of Participating Laboratories

Based on the grading criteria for Cd in Urine, 99% of results were satisfactory, with 0 of the 21 laboratories reporting 2 or more of the 5 results outside of the acceptable ranges.

\* Denotes a statistical Outlier

## Results for Event #2, 2019: Summary Figures

### Urine Cd

#### Legend:

○ CHEAR Labs   ● Other Labs

Horizontal purple line = assigned target value based on the robust mean of all laboratories.

Gray area = acceptable range based on quality specifications:

$\pm 1 \mu\text{g}/\text{L}$  or  $\pm 15\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 1 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $6.6 \mu\text{g}/\text{L}$ .

Based on the grading criteria for TI in Urine, 100% of results were satisfactory, with 0 of the 15 laboratories reporting 2 or more of the 5 results outside of the acceptable ranges.

\* Denotes a statistical Outlier

## Results for Event #2, 2019: Summary Figures

### Urine TI

#### Legend:

○ CHEAR Labs ● Other Labs

Horizontal purple line = assigned target value based on the robust mean of all laboratories.

Gray area = acceptable range based on quality specifications:

±0.2  $\mu\text{g/L}$  or ±20% around the target value, whichever is greater; thus, it is fixed at ±0.2  $\mu\text{g/L}$  at concentrations less than or equal to 1  $\mu\text{g/L}$ .

## Results for Event #2, 2019: Summary Statistics

	Urine U ( $\mu\text{g}/\text{L}$ )				
	UE19-06	UE19-07	UE19-08	UE19-09	UE19-10
<b>Target (Robust Mean (<math>x^*</math>))</b>	0.151	0.187	0.032	0.222	0.078
<b>Upper Limit</b>	0.181	0.224	0.062	0.266	0.108
<b>Lower Limit</b>	0.121	0.150	0.002	0.178	0.048
<b>Robust SD (<math>s^*</math>)</b>	0.009	0.012	0.003	0.014	0.005
<b>Robust RSD (%)</b>	6.1	6.4	9.6	6.3	6.4
<b>Number of Sample Measurements (N)</b>	17	17	16	17	16
<b>Standard Uncertainty (<math>u</math>)</b>	0.003	0.004	0.001	0.004	0.002

The acceptable range is based on quality specifications:

$\pm 0.03 \mu\text{g}/\text{L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 0.03 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $0.15 \mu\text{g}/\text{L}$ . These quality specifications are based on the same criteria used by the US Centers for Disease Control Prevention (CDC) for public health labs participating in the Laboratory Response Network (LRN) PT program for Toxic Metals.

## Results for Event #2, 2019: Performance of Participating Laboratories

# **Trace Elements in Serum**

**Wadsworth Center**  
NEW YORK STATE DEPARTMENT OF HEALTH  
*Trace Elements Laboratory*

**Event #2, 2019:  
Trace Elements in Serum****PT Materials**

Test materials were prepared from human serum obtained from Zen-Bio, Inc. The company certifies that these materials were tested by FDA approved methods and found to be negative for HIV 1 $\ddot{\text{Z}}$ 2 and HIV-1 RNA, and non-reactive to HBsAg, HCV3 and STS. Units of serum were filtered into polypropylene containers through cheesecloth to remove particulates and supplemented with aluminum (Al), cobalt (Co), chromium (Cr), copper (Cu), selenium (Se), zinc (Zn), arsenic (As), beryllium (Be), cadmium (Cd), mercury (Hg), manganese (Mn), molybdenum (Mo), nickel (Ni), lead (Pb), platinum (Pt), antimony (Sb), tin (Sn), strontium (Sr), titanium (Ti), thallium (Tl), uranium (U), vanadium (V) and tungsten (W). Serum units were homogenized overnight prior to aliquoting 2-mL into polypropylene vials. PT samples were stored at -80°C until the week of the PT event, when they were thawed at 4°C prior to circulation to laboratories for analysis.

**Graded Elements**

Six elements in serum are formally graded: Al, Co, Cr, Cu, Se, and Zn. Target values for the graded elements are assigned to these pools based on (a) the robust mean calculated from data reported by all laboratories, or (b) if a robust mean is not possible, the arithmetic mean after outlier deletion.

**Additional Elements**

An additional 27 were reported by at least one participant: Ag, As, Ba, Be, Bi, Cd, Cs, Fe, Hg, I, Li, Mg, Mn, Mo, Ni, Pb, Pt, Sb, Sn, Sr, Te, Th, Ti, Tl, U, V, and W. These data are included here to provide a more complete characterization of the PT materials. All results reported by participant laboratories are tabulated and organized by lab code. The PT data are graphed for visual comparison purposes for all elements where at least five laboratories reported a value greater than the LOD. A statistical summary table is provided for samples where at least two comparable values were reported as above the LOD.

The summary statistics for the additional elements are provided for educational purposes only, i.e., no acceptable response is implied. However, it is expected that each laboratory would wish to investigate a potential source of bias if warranted by these data. Future events might result in additional elements becoming graded if a consensus can be reached regarding desired quality specifications.

## Results for Event #2, 2019: Summary Statistics

	Serum AI ( $\mu\text{g/L}$ )				
	SE19-06	SE19-07	SE19-08	SE19-09	SE19-10
<b>Target (Arithmetic Mean (<math>\bar{x}</math>))</b>	160	205	124	123	78
<b>Upper Limit</b>	192	246	149	148	94
<b>Lower Limit</b>	128	164	99	98	63
<b>Arithmetic SD (s)</b>	40	31	11	27	3
<b>Arithmetic RSD (%)</b>	25	15	8.9	22	3.4
<b>Number of Sample Measurements (N)</b>	6	6	5	6	5

The acceptable range is based on quality specifications:

$\pm 5 \mu\text{g/L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 5 \mu\text{g/L}$  at concentrations less than or equal to  $25 \mu\text{g/L}$ . These quality specifications were established by New York State Department of Health's Wadsworth Center, the PT Program organizer.

## Results for Event #2, 2019: Performance of Participating Laboratories

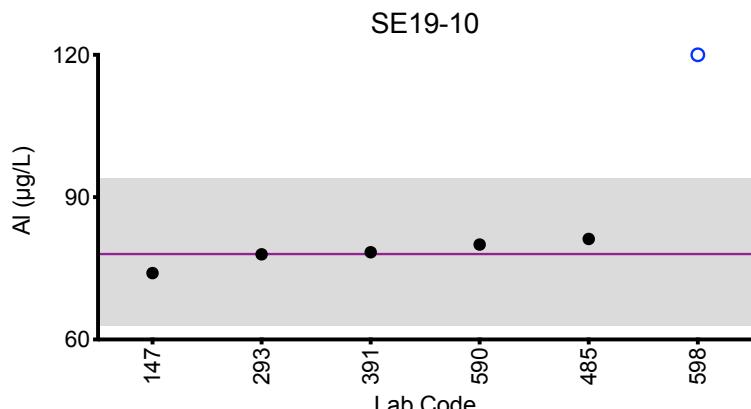

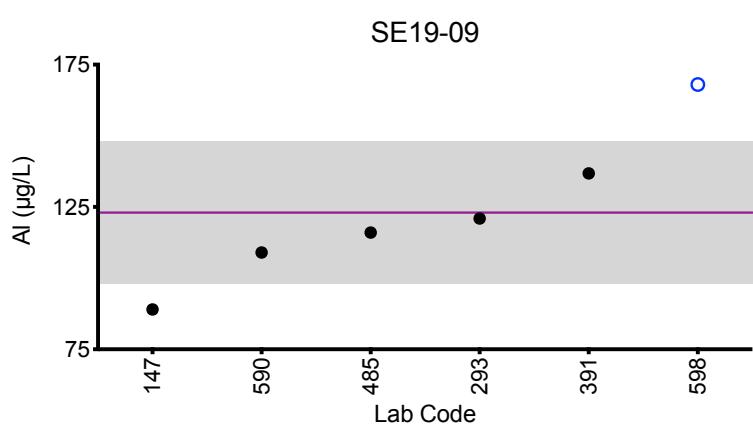

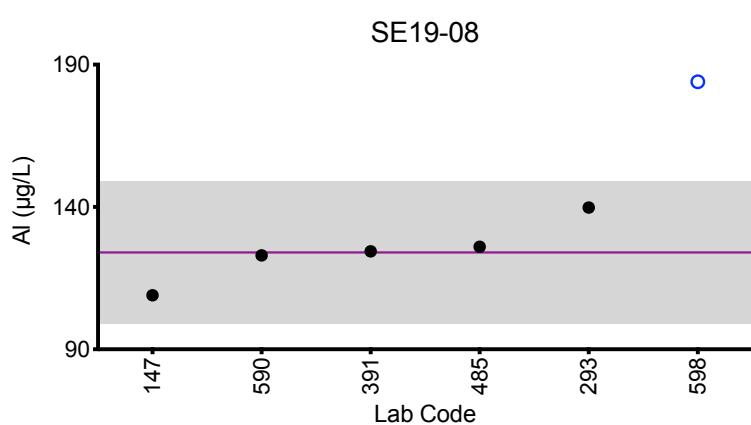

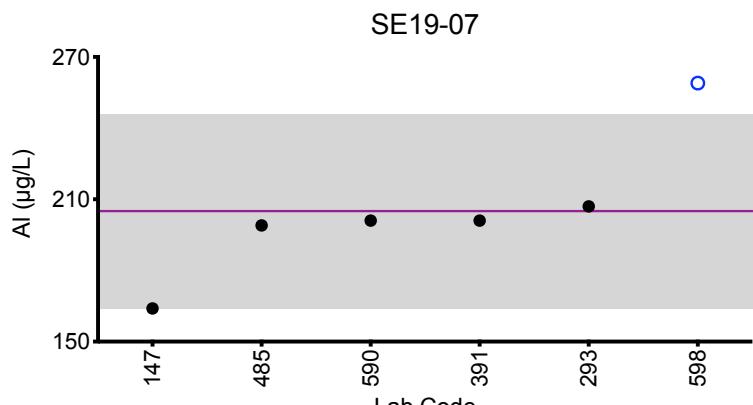

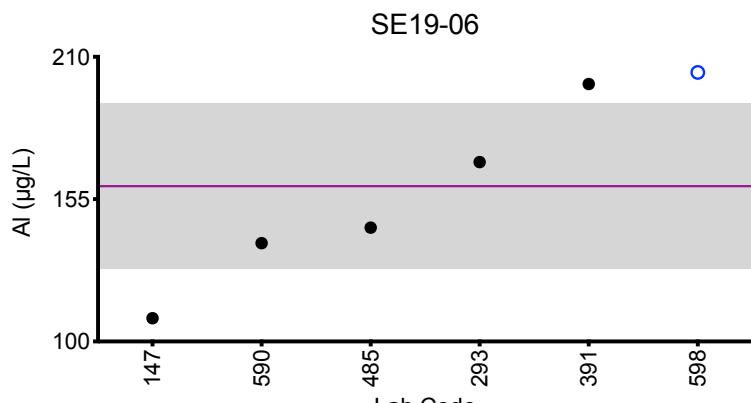

Lab Code	Method	Serum AI ( $\mu\text{g/L}$ )				
		SE19-06	SE19-07	SE19-08	SE19-09	SE19-10
Target		160	205	124	123	78
147	ETAAS-Z	109.00 ↓	164	109	89 ↓	74
293	DRC/CC-ICP-MS	169.35	206.99	139.78	120.97	77.96
391	ETAAS-Z	199.50 ↑	201	124.4	136.8	78.38

## Results for Event #2, 2019: Performance of Participating Laboratories

Lab Code	Method	Serum Cu ( $\mu\text{g/L}$ )				
		SE19-06	SE19-07	SE19-08	SE19-09	SE19-10
		Target	2780	1250	3030	803
107	DRC/CC-ICP-MS	2975	1322	3199	828	1341
110	ICP-MS	2730	1230	3100	798	1300
147	ICP-MS	2783	1252	3113	788	1347
264	ICP-MS	2692.64	1197.91	2909.93	757.39	1248.05
293	DRC/CC-ICP-MS	3013.35	1277.81	3095.99	820.09	1322.31
483	ICP-MS	2770	1230	2970	803	1290
590	ICP-MS	2628	1281	2891	808	1322
598	DRC/CC-ICP-MS	2638	1245	2946	823	1347

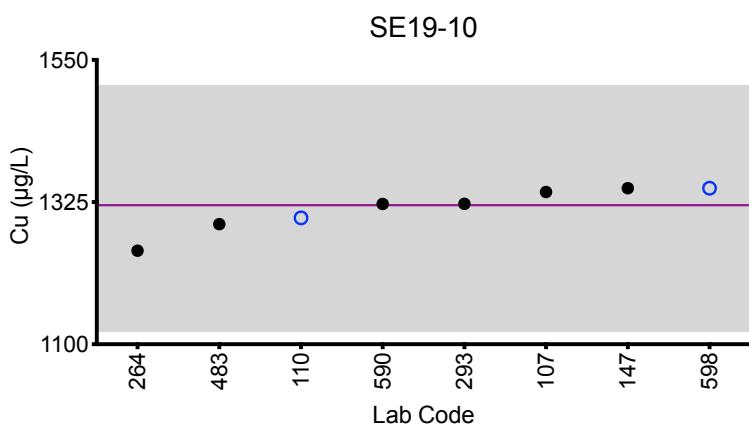

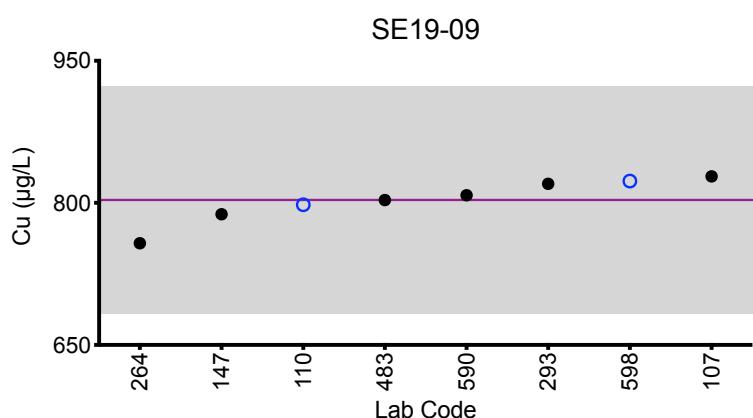

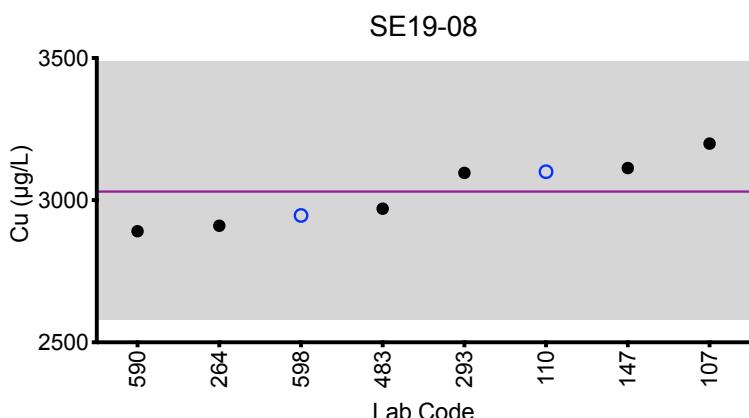

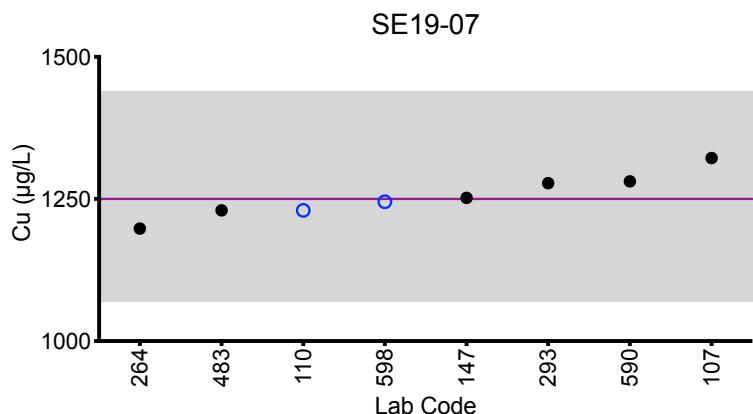

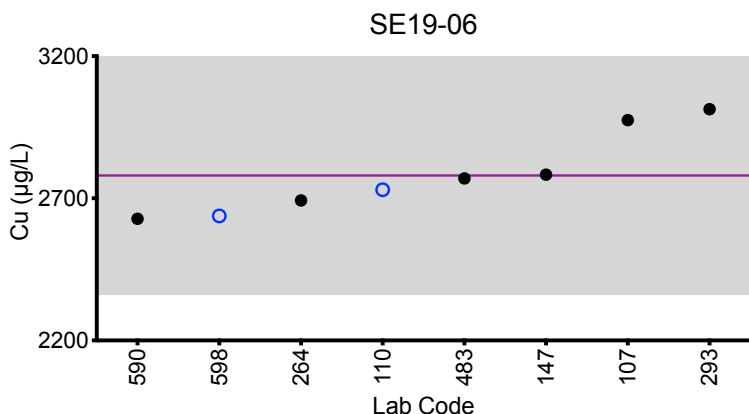

Based on the grading criteria for Cu in Serum, 100% of results were satisfactory, with 0 of the 8 laboratories reporting 2 or more of the 5 results outside of the acceptable ranges.

\* Denotes a statistical Outlier

## Results for Event #2, 2019: Summary Figures

### Serum Cu

**Legend:**

○ CHEAR Labs   ● Other Labs

Horizontal purple line = assigned target value based on the arithmetic mean of all laboratories.

Gray area = acceptable range based on quality specifications:

$\pm 95 \text{ } \mu\text{g/L}$  or  $\pm 15\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 95 \text{ } \mu\text{g/L}$  at concentrations less than or equal to  $635 \text{ } \mu\text{g/L}$ .

## Results for Event #2, 2019: Summary Statistics

Serum Se ( $\mu\text{g/L}$ )					
	SE19-06	SE19-07	SE19-08	SE19-09	SE19-10
<b>Target (Arithmetic Mean (<math>\bar{x}</math>))</b>	109	271	157	251	222
<b>Upper Limit</b>	131	325	188	301	266
<b>Lower Limit</b>	87	217	126	201	178
<b>Arithmetic SD (s)</b>	9	9	8	9	10
<b>Arithmetic RSD (%)</b>	8.3	3.3	5.1	3.6	4.5
<b>Number of Sample Measurements (N)</b>	8	8	8	8	8

The acceptable range is based on quality specifications:

$\pm 2 \mu\text{g/L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 2 \mu\text{g/L}$  at concentrations less than or equal to  $10 \mu\text{g/L}$ . These quality specifications were established by New York State Department of Health's Wadsworth Center, the PT Program organizer.

## Results for Event #2, 2019: Performance of Participating Laboratories

Lab Code	Method	Serum Se ( $\mu\text{g/L}$ )				
		SE19-06	SE19-07	SE19-08	SE19-09	SE19-10
		Target	109	271	157	251
103	DRC/CC-ICP-MS	109	273	154	249	217
107	DRC/CC-ICP-MS	108.7	274.1	151.8	256.9	219.1
110	DRC/CC-ICP-MS	106	262	154	250	226
147	ICP-MS	95.6	265	163	239	228
264	ICP-MS	*51.2 ↓	*130.65 ↓	*77.86 ↓	*122.85 ↓	*110.54 ↓
293	DRC/CC-ICP-MS	123.91	291.24	172.85	265.19	241.52
