**Event #3, 2019:  
Trace Elements in Whole Blood, Urine, and Serum**  
12/13/2019

Dear Laboratory Director,

This report summarizes performance for the third biomonitoring proficiency test (PT) event of 2019 for Trace Elements in Whole Blood, Urine, and Serum. One of the key goals of this PT program is to achieve harmonization of biomonitoring data for trace elements.

**Target Value Assignment and Performance Evaluation:**

For these PT materials, target values have been assigned for a limited number of trace elements that are gradable under criteria set by the NYS DOH Biomonitoring PT program. See assay-specific narratives for details. Data for additional trace elements are reported and are included here in order to characterize the PT materials more completely. Participant data and descriptive statistics are provided for educational purposes. No target value or acceptable range is implied.

Where the data permit, robust statistics were used to assign target values based on Algorithm A as defined by ISO 13528:2005E *Statistical methods for use in proficiency testing by inter-laboratory comparisons* [1]. Acceptable ranges for the graded elements are based on consensus criteria and/or those set by the NYS DOH's PT program. For example, some are fixed based on US regulatory guidelines (Pb, Cd) while for other elements the criteria are based on a consensus of the Network of PT scheme organizers for trace elements in occupational and environmental laboratory medicine [2]. Quality specifications are element and matrix specific; full details are provided under each element specific narrative.

A confidential, three-digit code number assigned by PT program staff identifies all laboratory participants.

Samples for the next PT event (Event #1, 2020) will be shipped February 19, 2020. Comments about this report may be directed to [trel@health.ny.gov](mailto:trel@health.ny.gov). If you have not yet enrolled for next year, please contact PT program staff at [trel@health.ny.gov](mailto:trel@health.ny.gov).

Sincerely,

A handwritten signature in blue ink that reads "Patrick J. Parsons".

Patrick J. Parsons, PhD  
Chief, Inorganic and Nuclear Chemistry,  
Division of Environmental Sciences

### **Event #3, 2019: Trace Elements in Whole Blood**

#### **PT Materials**

Human whole blood was purchased from Zen-Bio, Inc. and preserved with K<sub>2</sub>EDTA. The company certifies that this material was "non-reactive" for HBsAg, HBV DNA, HIV-1,2 Ab, HIV-1 RNA, HCV Ab, HCV RNA, and STS. Units of whole blood were filtered into polypropylene containers through cheesecloth to remove particulates and supplemented with arsenic (As), cadmium (Cd), cobalt (Co), chromium (Cr), mercury (Hg), manganese (Mn), lead (Pb), barium (Ba), beryllium (Be), copper (Cu), molybdenum (Mo), nickel (Ni), platinum (Pt), antimony (Sb), selenium (Se), tin (Sn), titanium (Ti), thallium (Tl), uranium (U), vanadium (V), tungsten (W), and zinc (Zn). Whole blood samples were homogenized overnight prior to aliquoting 2-mL into polypropylene vials. PT samples were stored at -80°C until the week of the PT event, when they were thawed at 4°C prior to circulation to laboratories for analysis.

#### **Graded Elements**

Seven elements in whole blood are formally graded: As, Cd, Co, Cr, Hg, Mn, and Pb. Target values for the graded elements are assigned to these pools based on (a) the robust mean calculated from data reported by all laboratories, or (b) if a robust mean is not possible, the arithmetic mean after outlier deletion.

#### **Additional Elements**

An additional 25 elements were reported by at least one participant: Ag, Al, Ba, Be, Bi, Cs, Cu, I, Li, Mg, Mo, Ni, Pt, Sb, Se, Sn, Sr, Te, Th, Ti, Tl, U, V, W, and Zn. These data are included here to provide a more complete characterization of the PT materials. All results reported by participant laboratories are tabulated and organized by lab code. The PT data are graphed for visual comparison purposes for all elements where at least five laboratories reported a value greater than the LOD. A statistical summary table is provided for samples where at least two comparable values were reported as above the LOD.

The summary statistics for the additional elements are provided for educational purposes only, i.e., no acceptable response is implied. However, it is expected that each laboratory would wish to investigate a potential source of bias if warranted by these data. Future events might result in additional elements becoming graded if a consensus can be reached regarding desired quality specifications.

## Results for Event #3, 2019: Summary Statistics

Whole Blood As ( $\mu\text{g/L}$ )					
	BE19-11	BE19-12	BE19-13	BE19-14	BE19-15
<b>Target (Arithmetic Mean (<math>\bar{x}</math>))</b>	42.6	5.68	7.81	2.61	21.0
<b>Upper Limit</b>	51.1	11.68	13.81	8.61	27.0
<b>Lower Limit</b>	34.1	0.00	1.81	0.00	15.0
<b>Arithmetic SD (s)</b>	2.8	0.46	0.45	0.21	1.6
<b>Arithmetic RSD (%)</b>	6.6	8.1	5.1	8.4	7.6
<b>Number of Sample Measurements (N)</b>	9	9	9	9	8

The acceptable range is based on quality specifications:

$\pm 6 \mu\text{g/L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 6 \mu\text{g/L}$  at concentrations less than or equal to  $30 \mu\text{g/L}$ . These quality specifications were established by New York State Department of Health's Wadsworth Center, the PT Program organizer.

## Results for Event #3, 2019: Performance of Participating Laboratories

Lab Code	Method	Whole Blood As ( $\mu\text{g/L}$ )				
		BE19-11	BE19-12	BE19-13	BE19-14	BE19-15
		Target	42.6	5.68	7.81	2.61
103	DRC/CC-ICP-MS	44.6	5.64	7.84	2.49	21.8
110	DRC/CC-ICP-MS	41.0	5.8	8.1	3.00	21.8
147	ICP-MS	40.7	4.97	7.11	2.26	20.5
264	ICP-MS	41.09	5.04	7.23	2.63	19.39
293	DRC/CC-ICP-MS	42.82	5.48	7.65	2.56	*3.34 ↓
391	ICP-MS	37.847	6.37	7.793	2.622	19.071
597	ICP-MS/MS	43.3	5.75	8.35	2.54	19.67
598	DRC/CC-ICP-MS	47.9	6.07	8.41	2.89	23.7
599	DRC/CC-ICP-MS	44.4	5.98	7.80	2.53	22.46

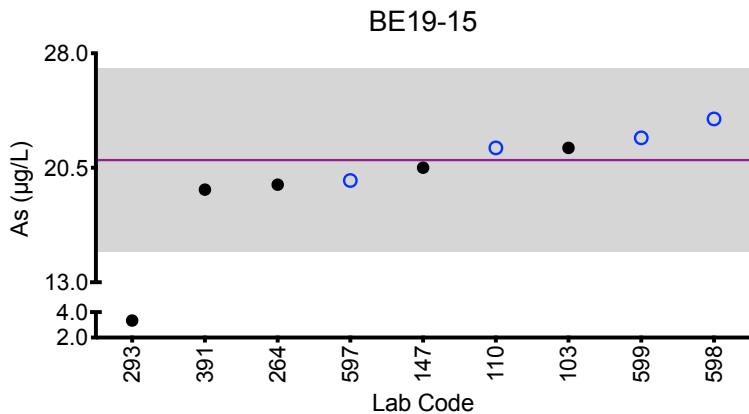

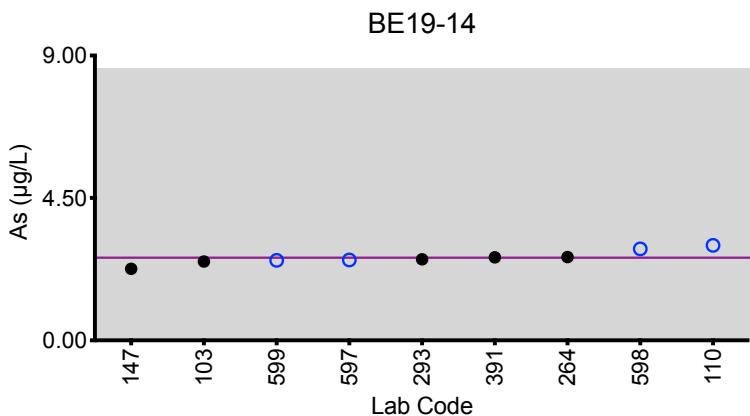

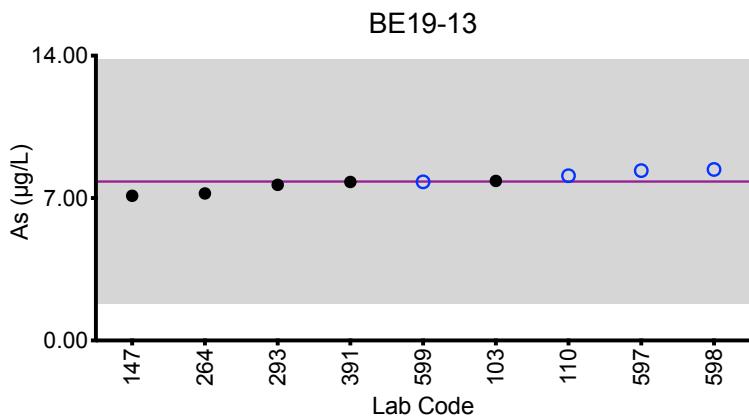

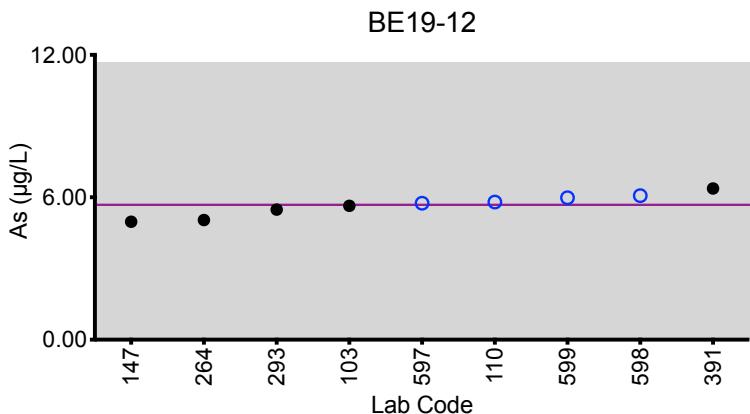

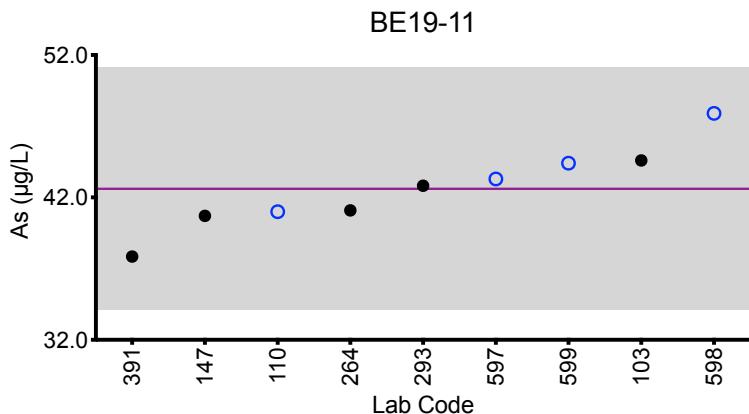

Based on the grading criteria for As in Whole Blood, 98% of results were satisfactory, with 0 of the 9 laboratories reporting 2 or more of the 5 results outside of the acceptable ranges.

\* Denotes a statistical Outlier

## Results for Event #3, 2019: Summary Figures

### Whole Blood As

#### Legend:

○ CHEAR Labs   ● Other Labs  
Horizontal purple line = assigned target value based on the arithmetic mean of all laboratories.  
Gray area = acceptable range based on quality specifications:  
 $\pm 6 \mu\text{g}/\text{L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 6 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $30 \mu\text{g}/\text{L}$ .

## Results for Event #3, 2019: Summary Statistics

	Whole Blood Cd ( $\mu\text{g}/\text{L}$ )				
	BE19-11	BE19-12	BE19-13	BE19-14	BE19-15
<b>Target (Robust Mean (<math>x^*</math>))</b>	0.83	0.96	0.63	0.60	0.182
<b>Upper Limit</b>	1.83	1.96	1.63	1.60	1.182
<b>Lower Limit</b>	0.00	0.00	0.00	0.00	0.000
<b>Robust SD (<math>s^*</math>)</b>	0.08	0.04	0.07	0.08	0.021
<b>Robust RSD (%)</b>	9.4	4.4	11	13	11
<b>Number of Sample Measurements (N)</b>	14	14	14	14	11
<b>Standard Uncertainty (<math>u</math>)</b>	0.03	0.01	0.03	0.03	0.008

The acceptable range is based on quality specifications:

$\pm 1 \mu\text{g}/\text{L}$  or  $\pm 15\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 1 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $6.7 \mu\text{g}/\text{L}$ . These quality specifications are based on those used by US OSHA for occupational exposure.

Based on the grading criteria for Mn in Whole Blood, 93% of results were satisfactory, with 1 of the 12 laboratories reporting 2 or more of the 5 results outside of the acceptable ranges.

\* Denotes a statistical Outlier

## Results for Event #3, 2019: Summary Figures

### Whole Blood Mn

**Legend:**

○ CHEAR Labs   ● Other Labs

Horizontal purple line = assigned target value based on the robust mean of all laboratories.

Gray area = acceptable range based on quality specifications:

$\pm 3 \mu\text{g/L}$  or  $\pm 17\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 3 \mu\text{g/L}$  at concentrations less than or equal to  $17.7 \mu\text{g/L}$ .

Center

## Results for Event #3, 2019: Summary Statistics

	Whole Blood Pb ( $\mu\text{g/dL}$ )				
	BE19-11	BE19-12	BE19-13	BE19-14	BE19-15
<b>Target (Robust Mean (<math>x^*</math>))</b>	26.3	7.7	17.7	3.38	0.61
<b>Upper Limit</b>	28.9	9.7	19.7	5.38	2.61
<b>Lower Limit</b>	23.7	5.7	15.7	1.38	0.00
<b>Robust SD (<math>s^*</math>)</b>	1.6	0.4	1.4	0.17	0.03
<b>Robust RSD (%)</b>	6.1	5.3	7.9	5.1	5.5
<b>Number of Sample Measurements (N)</b>	16	16	16	16	11
<b>Standard Uncertainty (<math>u</math>)</b>	0.5	0.1	0.4	0.05	0.01

The acceptable range is based on quality specifications:

$\pm 2 \mu\text{g/dL}$  or  $\pm 10\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 2 \mu\text{g/dL}$  at concentrations less than or equal to  $20 \mu\text{g/dL}$ . These quality specifications are recommended by the Clinical Laboratory Standards Institute (CLSI, C40-A2) and have been proposed for use in proficiency testing programs approved under CLIA by the Centers for Medicare and Medicaid Services (CMS) in the USA. (<https://clsi.org/standards/products/clinical-chemistry-and-toxicology/documents/c40/>)

## Event #3, 2019: Trace Elements in Urine

### PT Materials

Urine was collected from volunteer donors into polyethylene containers and stored at 4°C. Following collection, urine was acidified to 1% (v/v) with nitric acid and mixed with a sulfamic acid solution (stock solution contained 200 mg/mL sulfamic acid and 10% (v/v) Triton-X 100) to a final concentration of 1% (v/v) to stabilize Hg. Urine was stored frozen at -80°C pending further preparation. The urine was thawed at room temperature and precipitated salts removed by centrifugation. Urine supernatants were combined into five separate pools. Each urine pool was supplemented with arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), cobalt (Co), chromium (Cr), mercury (Hg), manganese (Mn), lead (Pb), thallium (Tl), uranium (U), aluminum (Al), cesium (Cs), copper (Cu), molybdenum (Mo), nickel (Ni), platinum (Pt), antimony (Sb) selenium (Se), tin (Sn), strontium (Sr), tellurium (Te), vanadium (V), tungsten (W), and zinc (Zn) and were homogenized overnight prior to aliquoting 10-mL into polypropylene vials. PT samples were stored at -80°C until the week of the PT event, when they were thawed at 4°C prior to circulation to laboratories for analysis.

### Graded Elements

Eleven elements in urine are formally graded: As, Ba, Be, Cd, Co, Cr, Hg, Mn, Pb, Tl, and U. Target values for the graded elements are assigned to these pools based on (a) the robust mean calculated from data reported by all laboratories, or (b) if a robust mean is not possible, the arithmetic mean after outlier deletion.

### Additional Elements

An additional 22 elements were reported by at least one participant: Ag, Al, B, Bi, Cs, Cu, Fe, I, Li, Mg, Mo, Ni, Pt, Sb, Se, Sn, Sr, Te, Th, V, W, and Zn. These data are included here to provide a more complete characterization of the PT materials. All results reported by participant laboratories are tabulated and organized by lab code. The PT data are graphed for visual comparison purposes for all elements where at least five laboratories reported a value greater than the LOD. A statistical summary table is provided for samples where at least two comparable values were reported as above the LOD.

The summary statistics for the additional elements are provided for educational purposes only, i.e., no acceptable response is implied. However, it is expected that each laboratory would wish to investigate a potential source of bias if warranted by these data. Future events might result in additional elements becoming graded if a consensus can be reached regarding desired quality specifications.

## Results for Event #3, 2019: Summary Statistics

	Urine As ( $\mu\text{g}/\text{L}$ )				
	UE19-11	UE19-12	UE19-13	UE19-14	UE19-15
<b>Target (Robust Mean (<math>x^*</math>))</b>	3.7	14.5	29.4	97	63.6
<b>Upper Limit</b>	9.7	20.5	35.4	116	76.3
<b>Lower Limit</b>	0.0	8.5	23.4	78	50.9
<b>Robust SD (<math>s^*</math>)</b>	0.4	1.0	2.8	5	2.6
<b>Robust RSD (%)</b>	12	6.9	9.5	5.1	4.1
<b>Number of Sample Measurements (N)</b>	16	19	19	19	19
<b>Standard Uncertainty (<math>u</math>)</b>	0.1	0.3	0.8	1	0.7

The acceptable range is based on quality specifications:

$\pm 6 \mu\text{g}/\text{L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 6 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $30 \mu\text{g}/\text{L}$ . These quality specifications are based on the same criteria used by the US Centers for Disease Control Prevention (CDC) for public health labs participating in the Laboratory Response Network (LRN) PT program for Toxic Metals.

## Results for Event #3, 2019: Performance of Participating Laboratories

<b>Standard Uncertainty (<math>u</math>)</b>	0.03	0.05	0.03	0.007	0.01

The acceptable range is based on quality specifications:

$\pm 1 \mu\text{g}/\text{L}$  or  $\pm 15\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 1 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $6.6 \mu\text{g}/\text{L}$ . These quality specifications are based on the same criteria used by the US Centers for Disease Control Prevention (CDC) for public health labs participating in the Laboratory Response Network (LRN) PT program for Toxic Metals.

## Results for Event #3, 2019: Performance of Participating Laboratories

Lab Code	Method	Urine Cd ( $\mu\text{g/L}$ )				
		UE19-11	UE19-12	UE19-13	UE19-14	UE19-15
		Target	4.97	3.79	2.19	0.241

<b>Number of Sample Measurements (N)</b>	15	15	15	15	15
<b>Standard Uncertainty (<math>u</math>)</b>	0.02	0.007	0.004	0.008	0.01

The acceptable range is based on quality specifications:

$\pm 0.2 \mu\text{g}/\text{L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 0.2 \mu\text{g}/\text{L}$  at concentrations less than or equal to  $1 \mu\text{g}/\text{L}$ . These quality specifications are based on the same criteria used by the US Centers for Disease Control Prevention (CDC) for public health labs participating in the Laboratory Response Network (LRN) PT program for Toxic Metals.

## Results for Event #3, 2019: Performance of Participating Laboratories

## Event #3, 2019: Trace Elements in Serum

### PT Materials

Test materials were prepared from human serum obtained from Zen-Bio, Inc. The company certifies that these materials were tested by FDA approved methods and found to be negative for HIV 1 $\ddot{\text{Z}}$ 2 and HIV-1 RNA, and non-reactive to HBsAg, HCV3 and STS. Units of serum were filtered into polypropylene containers through cheesecloth to remove particulates and supplemented with aluminum (Al), cobalt (Co), chromium (Cr), copper (Cu), selenium (Se), zinc (Zn), arsenic (As), beryllium (Be), cadmium (Cd), mercury (Hg), manganese (Mn), molybdenum (Mo), nickel (Ni), lead (Pb), platinum (Pt), antimony (Sb), tin (Sn), strontium (Sr), titanium (Ti), thallium (Tl), uranium (U), vanadium (V) and tungsten (W). Serum units were homogenized overnight prior to aliquoting 2-mL into polypropylene vials. PT samples were stored at -80°C until the week of the PT event, when they were thawed at 4°C prior to circulation to laboratories for analysis.

### Graded Elements

Five elements in serum are formally graded: Co, Cr, Cu, Se, and Zn. Target values for the graded elements are assigned to these pools based on (a) the robust mean calculated from data reported by all laboratories, or (b) if a robust mean is not possible, the arithmetic mean after outlier deletion. The data for serum Al in this event exhibit an unusually large scatter, which suggests these pools are inhomogeneous for this element. Consequently, there is a lack of consensus among participating labs and target values cannot be assigned with confidence. The raw data reported by participants are shown but without target values or grading.

### Additional Elements

An additional 28 were reported by at least one participant: Ag, As, B, Ba, Be, Bi, Cd, Cs, Fe, Hg, I, Li, Mg, Mn, Mo, Ni, Pb, Pt, Sb, Sn, Sr, Te, Th, Ti, Tl, U, V, and W. These data are included here to provide a more complete characterization of the PT materials. All results reported by participant laboratories are tabulated and organized by lab code. The PT data are graphed for visual comparison purposes for all elements where at least five laboratories reported a value greater than the LOD. A statistical summary table is provided for samples where at least two comparable values were reported as above the LOD.

The summary statistics for the additional elements are provided for educational purposes only, i.e., no acceptable response is implied. However, it is expected that each laboratory would wish to investigate a potential source of bias if warranted by these data. Future events might result in additional elements becoming graded if a consensus can be reached regarding desired quality specifications.

## Results for Event #3, 2019: Summary Statistics

	Serum AI ( $\mu\text{g/L}$ )				
	SE19-11	SE19-12	SE19-13	SE19-14	SE19-15
<b>Target (Arithmetic Mean (<math>\bar{x}</math>))</b>	NA	NA	NA	NA	NA
<b>Upper Limit</b>	NA	NA	NA	NA	NA
<b>Lower Limit</b>	NA	NA	NA	NA	NA
<b>Arithmetic SD (s)</b>	NA	NA	NA	NA	NA
<b>Arithmetic RSD (%)</b>	NA	NA	NA	NA	NA
<b>Number of Sample Measurements (N)</b>	NA	NA	NA	NA	NA

The acceptable range is based on quality specifications:

$\pm 5 \mu\text{g/L}$  or  $\pm 20\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 5 \mu\text{g/L}$  at concentrations less than or equal to  $25 \mu\text{g/L}$ . These quality specifications were established by New York State Department of Health's Wadsworth Center, the PT Program organizer.

NA - Not Assigned

Statistical data were not calculated for SE19-11, SE19-12, SE19-13, SE19-14, or SE19-15 based on a lack of consensus among participating labs. Lack of consensus likely reflects sporadic contamination during production. Consequently, target values cannot be assigned with confidence.

Based on the grading criteria for Cr in Serum, 100% of results were satisfactory, with 0 of the 8 laboratories reporting 2 or more of the 5 results outside of the acceptable ranges.

\* Denotes a statistical Outlier

## Results for Event #3, 2019: Summary Figures

### Serum Cr

#### Legend:

○ CHEAR Labs   ● Other Labs

Horizontal purple line = assigned target value

based on the arithmetic mean of all laboratories.

Gray area = acceptable range based on quality specifications:

$\pm 2 \mu\text{g/L}$  or  $\pm 20\%$  around the target value,  
whichever is greater; thus, it is fixed at  $\pm 2 \mu\text{g/L}$  at concentrations less than or equal to  $10 \mu\text{g/L}$ .

## Results for Event #3, 2019: Summary Statistics

	Serum Cu ( $\mu\text{g/L}$ )				
	SE19-11	SE19-12	SE19-13	SE19-14	SE19-15
<b>Target (Robust Mean (<math>x^*</math>))</b>	1780	840	2060	1370	1080
<b>Upper Limit</b>	2050	970	2370	1580	1240
<b>Lower Limit</b>	1510	710	1750	1160	920
<b>Robust SD (<math>s^*</math>)</b>	120	60	40	110	60
<b>Robust RSD (%)</b>	6.7	7.1	1.9	8.1	5.6
<b>Number of Sample Measurements (N)</b>	10	10	10	10	10
<b>Standard Uncertainty (<math>u</math>)</b>	50	20	20	40	20

The acceptable range is based on quality specifications:

$\pm 95 \mu\text{g/L}$  or  $\pm 15\%$  around the target value, whichever is greater; thus, it is fixed at  $\pm 95 \mu\text{g/L}$  at concentrations less than or equal to  $635 \mu\text{g/L}$ . These quality specifications were established by New York State Department of Health's Wadsworth Center, the PT Program organizer.

## Results for Event #3, 2019: Performance of Participating Laboratories

## Results for Event #3, 2019: Summary Figures

### Serum V

#### Legend:

○ CHEAR Labs   ● Other Labs  
Horizontal purple line = arithmetic mean of all laboratories.  
Gray area =  $\pm 2\text{SD}$  of the mean.

The mean and  $\pm 2\text{SD}$  of all laboratories are not intended to be quality specifications and are included for informational purposes only.
